

Is your water network as cost-effective as it could be?

You don't need to take on ***all*** the stress of water management and water distribution...

...engineered efficiency is on hand to take charge of all your requirements while also creating cost-savings for your business.

With a combined 50 years' experience, the team has the skilled expertise readily available to deliver complete cost-optimisation from initial set-up through to operational essentials (and beyond), internal monitoring, servicing and maintenance costs.

And if there is a problem, **engineered efficiency** has the knowhow to pinpoint the precise resolution that not only keeps your system on track but also delivers improvements along the way.

What we can offer

- *Initial system set-up (installed to ensure future cost-savings).*
- *Internal monitoring to ensure smooth operations.*
- *Asset management registers to help you understand what assets you have and their exact location.*
- *Continuous monitoring to detect issues as soon as they arise.*
- *Alerts and alarms to allow a timely and coordinated response to potential issues and loss events.*
- *Identifying trends and benchmarking against industry standards to ensure your system is providing the best value for money.*
- *Ensuring you are up-to-date with relevant technology and innovations so you have a fit-for-purposes system.*
- *Sourcing alternative water sources and best re-use options so your water is working for YOU, rather than the other way around.*
- *Water-loss prevention and solutions, delivering a commitment to conservation.*

Problem? Let ***us*** find the solution!

What our services can mean for *YOU*

- **Less stress:** we do what's required so you don't have to.
- Tackling the **right** problems to deliver the best value for money.
- Providing **improvements** so your network operates at **maximum efficiency**.
- **Cost savings**, due to **engineered efficiency's** technical expertise.

Success story

As an official contractor for the Water Corporation, **engineered efficiency** knows water networks. A successful underground leak detection program has provided valuable data to the Water Corporation, enabling leaks to be found and rectified, pipes to be maintained and water loss to be minimised, leading to **savings of thousands of dollars**.
